Loading from flight 140927a  
Data taken from NOx CPU c:\data\CO

Flight used Dubey Manvendra's mixed gas 'standard'. The actual values of this standard have not yet been provided. On 140912, standard addition frequency changed from 1/30 min to 1/60 min.

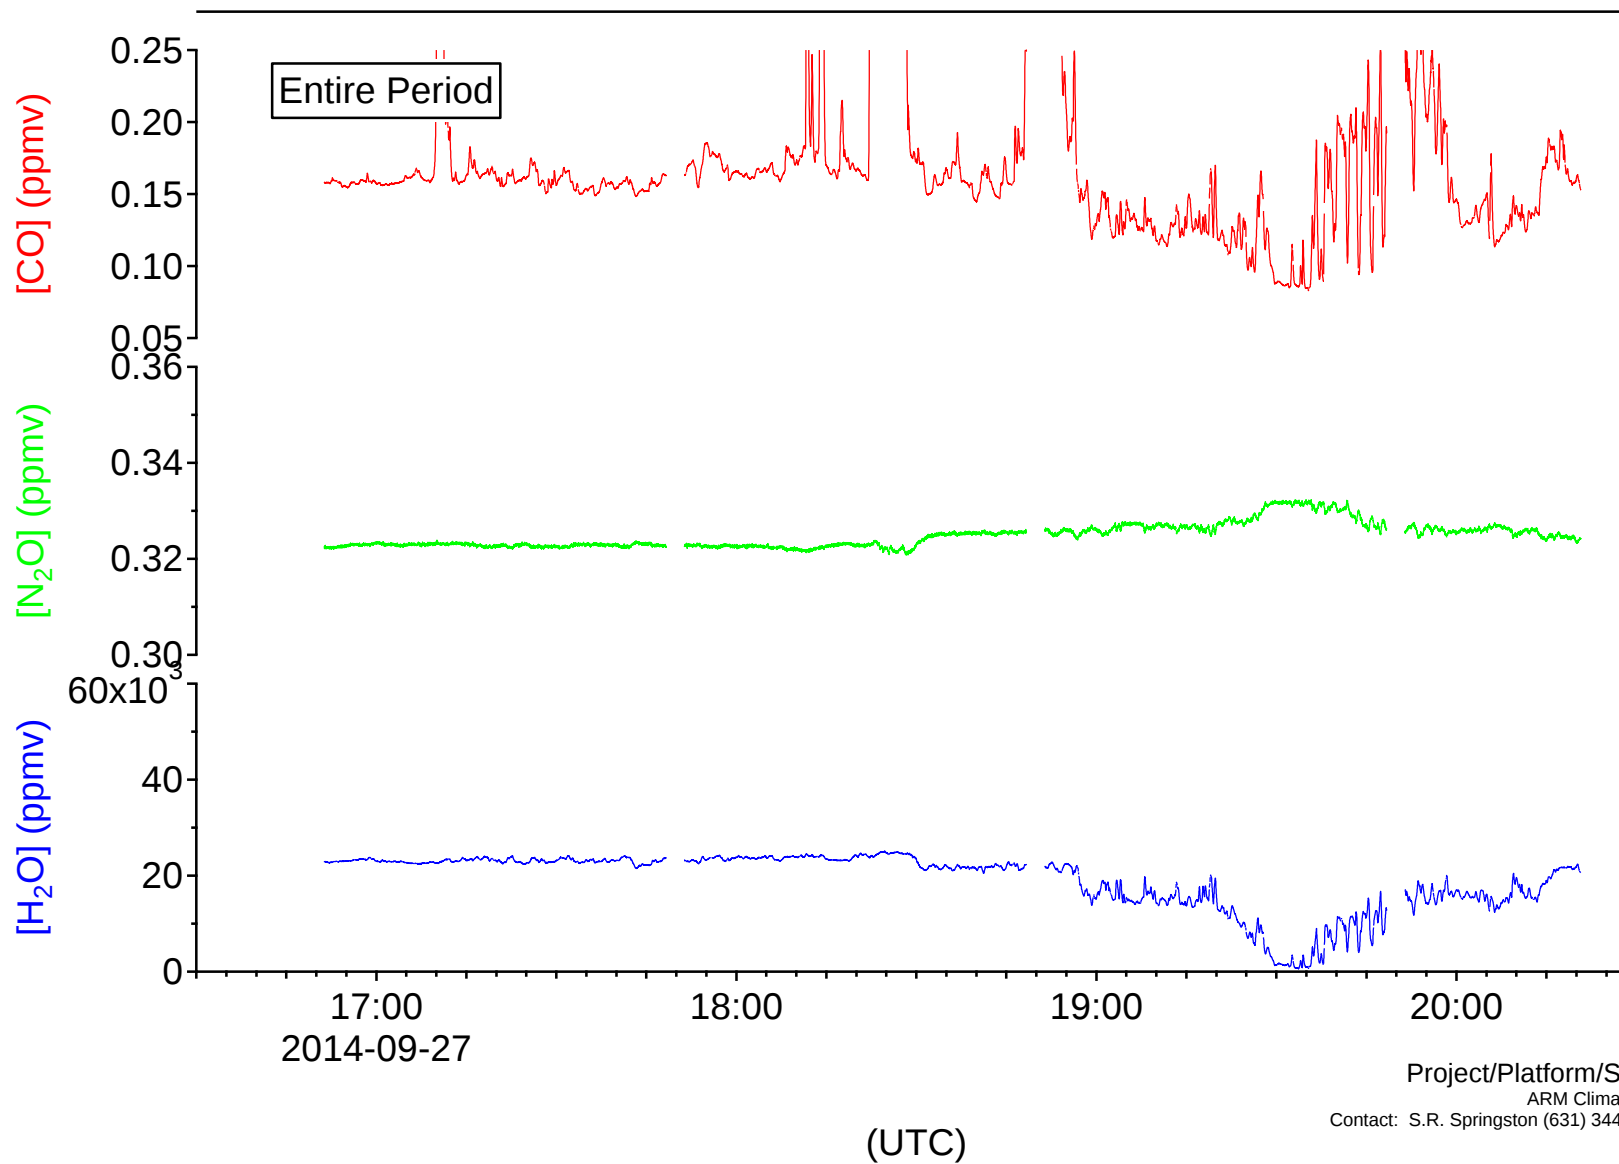

Ambient data appear valid.

Interesting oscillations(?) between 19:30 and 20:15 where there appear patches of clean, dry air interspersed with higher levels.
